### QUESTION 1

The Orders form has two Record Groups: the SHIP Record Group that was created at design time, and the SOLD Record Group that was created at run time. You are required to write a Program Unit that will delete both Record Groups.

Which two statements describe your situation? (Select two.)

- A. You cannot delete Record Group SOLD at run time.
- B. You cannot delete Record Group SHIP at run time.
- C. You should delete Record Group SOLD with built-in `DELETE_GROUP(\\SOLD\\)`;
- D. You should delete Record Group SHIP with built-in `DELETE_GROUP(\\SHIP\\)`;
- E. You should delete Record Group SOLD with built-in `DELETE_GROUP_ROW(\\SOLD\\,ALL_ROWS)`;
- F. You should delete Record Group SHIP with built-in `DELETE_GROUP_ROW(\\SHIP\\,ALL_ROWS)`;

Correct Answer: BC

---

### QUESTION 2

An application is accessed through the Summit form, which can open the Customers form and the Orders form. The Customers form can also open the Orders form, and the Orders form can open the Customers form. What should you do to ensure that forms are closed in the proper order so that the session closes down when the last form is exited?

- A. You should keep track of the order of the opening of forms in a global record group. Then in the Key-Exit trigger for each form, you should allow only the last form that was opened to be closed.
- B. You should make sure that the Summit form that started the session is the last one closed by coding its Key-Exit trigger to exit only if no other forms are open.
- C. You do not need to do anything because Forms keeps track of the forms that are opened internally and does not allow the user to close them in the wrong order.
- D. You do not need to do anything. No matter which form is closed last, the session will close properly.

Correct Answer: D

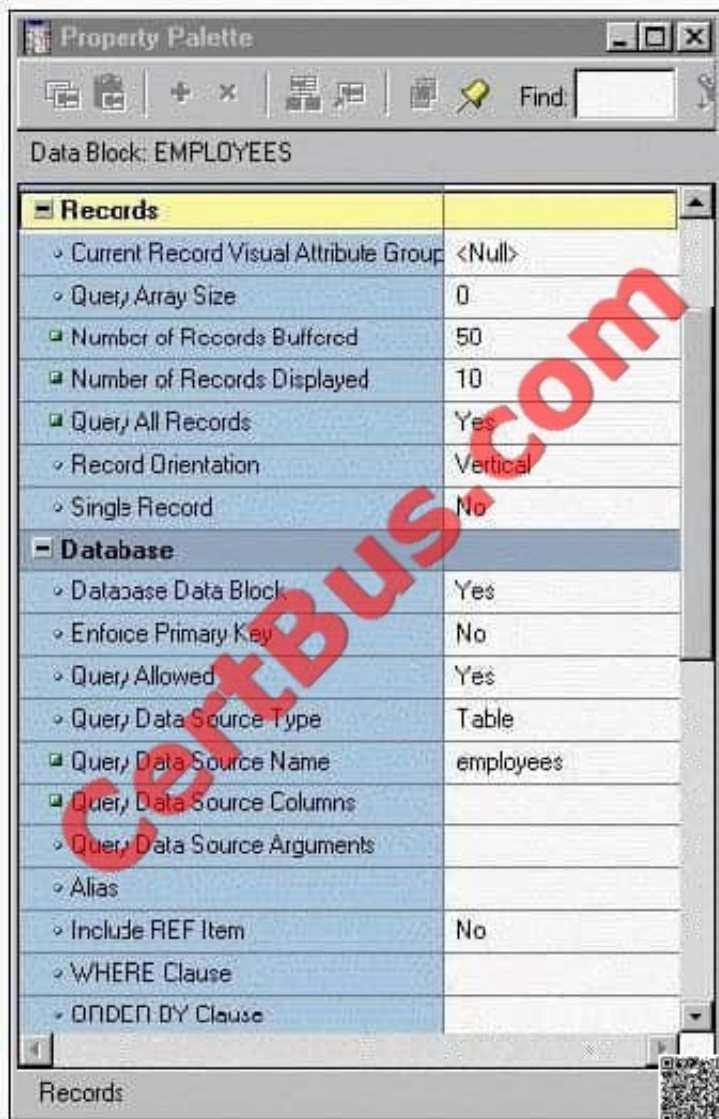

---

### QUESTION 3

View the Exhibit.

The EMPLOYEES table contains 100 records. You are developing a Human Resources form that has an Employees block with properties as shown in the exhibit. When you run the form and execute a query in the Employees block,

approximately how many network round trips will be made to the server before records are displayed in the block?

- A. 1
- B. 2
- C. 10
- D. 50
- E. 100

Correct Answer: C

**QUESTION 4**

Your company assigns three possible credit ratings to customers: Poor, Good, and Excellent (represented numerically by 1, 2, and 3). The DBA has just added a RATING column to the CUSTOMERS table and has asked you to add an item to your form so that credit ratings can be recorded. To restrict data entry clerks to one of these three values, you decide to create a radio group for the Rating item. You want to allow for an undetermined (Null) credit rating, and users should be able to update the credit rating from a value to an undetermined rating.

How can you implement this?

- A. Create three radio buttons for each of the credit ratings, and set the Mapping of Other Values for the radio group to Null.
- B. Create three radio buttons for each of the credit ratings, and set the Mapping of Other Values for the radio group to one of the credit rating values.
- C. Create four radio buttons, and leave blank the value for the undetermined credit rating.
- D. Choose a different type of input item, because radio groups do not allow entry and update of null values.

Correct Answer: C

---

#### QUESTION 5

Order entry clerks use the Orders form to enter the shipping date of an order. Once the shipping date has been entered into the database, the clerks are not allowed to modify it. What property can you set in the Property Palette for the Shipping\_Date item to ensure that this data entry restriction is enforced?

- A. Enabled
- B. Database Item
- C. Update Allowed
- D. Insert Allowed
- E. Update Only If NULL

Correct Answer: E
