### QUESTION 1

In the Orders form, you create a button in the CONTROL block to send the input focus to the INVENTORIES block and cause it to be queried.

You write this code in a When-Button-Pressed trigger:

```
GO_BLOCK(\\Inventories\\); EXECUTE_QUERY;
```

What happens when you test the form?

- A. The form will not compile because the block name must be uppercase.
- B. The form compiles, but clicking the button causes a Navigation Trap to be encountered. You must revise the code to avoid such a trap.
- C. The form compiles and runs as required. Focus moves to the INVENTORIES block, and it is queried automatically when the button is clicked.
- D. The form compiles and focus moves to the INVENTORIES block. But because the internal cursor is still in the CONTROL block, the query is attempted against the wrong block.
- E. The form compiles, but clicking the button causes an error message to appear. GO\_BLOCK() is a restricted procedure and cannot be called from any "When" triggers.
- F. The form compiles, but clicking the button leaves the focus in the original block, which is then queried. This could have been prevented if you had coded a check for FORM\_SUCCESS after the GO\_BLOCK ();

Correct Answer: C

---

### QUESTION 2

Which statement about the Data properties of a text item is true?

- A. If the Maximum Length of an item is set to a value that is greater than the value for Width, the item will not be displayed at run time.
- B. You can set the Initial Value for an item outside the range of values specified by the Lowest Allowed Value and the Highest Allowed Value properties because Initial Value defines an exception to that range.
- C. If you set the Required property to Yes for an item whose corresponding database column does not have a NOT NULL constraint, you will receive an error at run time.
- D. If the Data Length Semantics property is set to BYTE, you may need to manually adjust the Maximum Length property depending on the character set that is being used.

Correct Answer: D

---

### QUESTION 3

In an Order Entry form, the Order\_Items block has a text item called Shipping\_Date, which is of the Date data type. The Lowest Allowed Value and the Highest Allowed Value properties are not defined for this item. Assuming that all of the following are defined, which three are valid settings for the Initial Value property of the Shipping\_Date item? (Choose three.)

- A. \$\$DBDATE\$\$
- B. :Orders.Order\_Date + 3
- C. SYSDATE
- D. :GLOBAL.SHIP\_DATE
- E. :PARAMETER.SHIP\_DATE
- F. ORDER\_ITEMS\_SEQ

Correct Answer: ADE

---

### QUESTION 4

View the Exhibit.

You are developing an account management system for First National Bank. The Layout Editor for the Customer form is shown in the exhibit.

The three buttons on the form invoke separate forms to enter deposits and withdrawals for the customer's checking, savings, and money market accounts. Often deposits and withdrawals to these accounts are accomplished as part of a single transaction, so they must all be committed together or all rolled back if the commit fails.

How should you code the Checking button?

- A. OPEN\_FORM(\\Checking\\);
- B. OPEN\_FORM(\\Checking\\,SESSION);
- C. OPEN\_FORM(\\Checking\\,SESSION,ACTIVATE);
- D. OPEN\_FORM(\\Checking\\,SESSION,NO\_ACTIVATE);

Correct Answer: A

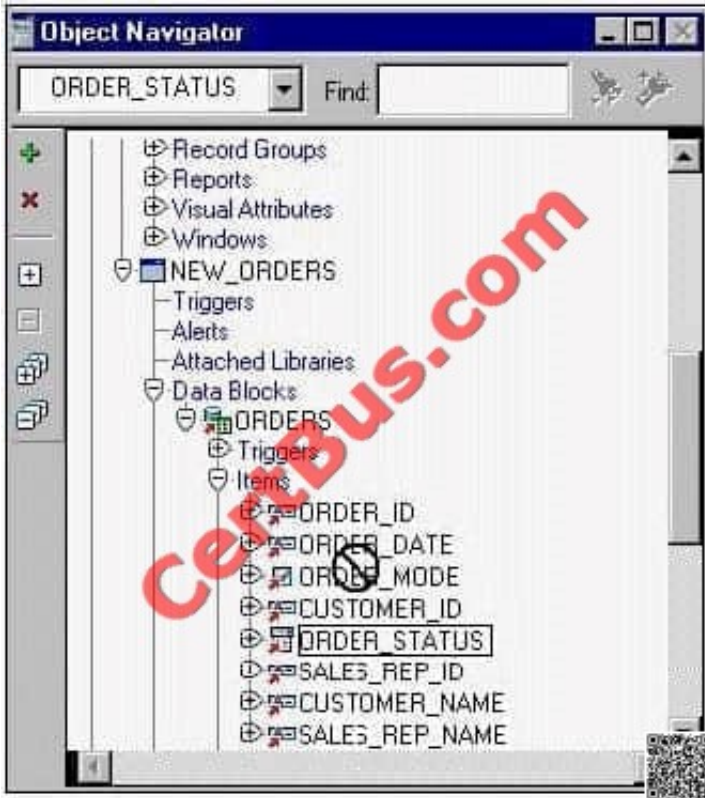

### QUESTION 5

View the Exhibit.

You are modifying the New\_Orders form. You want to change the navigation order of the Orders block so that Order\_Status is between Order\_Date and Order\_Mode in the navigation order.

You attempt to drag the Order\_Status item in the Object Navigator (as shown in the exhibit), but Forms does not allow you to release the item in the desired position.

Why is this happening, and what can you do to change the navigation order?

- A. Because the data block is subclassed, you cannot change the order of items in the object navigator, but you can change item properties to affect the navigation order.
- B. Because the data block is subclassed, you can only drag objects to a lower position in the Object Navigator, so you can drag Order\_Mode and Customer\_Id to a position below Order\_Status.
- C. Because the data block is subclassed, you will have to delete the object and then create it again in the desired position.
- D. Because the item is subclassed, you cannot change any of its properties.

Correct Answer: A
