### QUESTION 1

The network technician is troubleshooting a connectivity issue on a CAT5 cable with a wire map and notices that only pins 1, 3, and 6 are mapping correctly. Which of the following pins are open and keeping traffic from flowing correctly?

- A. 2
- B. 4
- C. 5
- D. 8

Correct Answer: A

---

### QUESTION 2

Which of the following uses classless subnet masks across a network?

- A. Subnetting
- B. CIDR
- C. Supernetting
- D. Summarization

Correct Answer: B

Classless Inter-Domain Routing is based on variable-length subnet masking (VLSM), which allows a network to be divided into variously sized subnets, providing the opportunity to size a network more appropriately for local needs and also CIDR allows an address or routing prefix to be written with a suffix indicating the number of bits of the prefix, such as 192.168.2.0/24.

---

### QUESTION 3

A number of remote users have reported being unable to securely log on to the company's network. Upon speaking with some of the employees experiencing the issue, no changes were made to their configurations, usernames, or passwords. The technician establishes a theory that one of the VPN concentrators may be down.

Which of the following should the technician do NEXT?

- A. Plan to reboot the concentrator as the potential solution
- B. Escalate the problem to management
- C. Continue to speak to users, questioning if changes have been made
- D. Test access to the concentrator to confirm the status

Correct Answer: D

---

#### QUESTION 4

Which of the following network topologies describes a network where each node is connected to multiple devices?

- A. Mesh
- B. Bus
- C. Star
- D. Ring

Correct Answer: A

---

#### QUESTION 5

A company has a remote access VPN and wants to ensure that if a username and password are compromised, the corporate network will remain secure. Which of the following will allow the company to achieve its security goal?

- A. Posture assessment
- B. Kerberos
- C. TACACS+
- D. Two-factor authentication

Correct Answer: D
