QUESTION 1

DLP can be combined with what other security technology to enhance data controls?

- A. SIEM
- B. Hypervisors
- C. DRM
- D. Kerberos

Correct Answer: C

DLP can be combined with DRM to protect intellectual property; both are designed to deal with data that falls into special categories. SIEMs are used for monitoring event logs, not live data movement. Kerberos is an authentication mechanism. Hypervisors are used for virtualization.

QUESTION 2

Many aspects of cloud computing bring enormous benefits over a traditional data center, but also introduce new challenges unique to cloud computing.

Which of the following aspects of cloud computing makes appropriate data classification of high importance?

- A. Multitenancy
- B. Interoperability
- C. Portability
- D. Reversibility

Correct Answer: A

With multitenancy, where different cloud customers all share the same physical systems and networks, data classification becomes even more important to ensure that the appropriate security controls are applied immediately to prevent any potential leakage or exposure to other customers. Portability refers to the ability to move easily from one cloud provider to another. Interoperability refers to the ability to reuse components and services for different uses. Reversibility refers to the ability of the cloud customer to quickly and completely remove all data and services from a cloud provider and to verify the removal.

QUESTION 3

Which of the following features is a main benefit of PaaS over IaaS?

- A. Location independence
- B. High-availability
- C. Physical security requirements

D. Auto-scaling

Correct Answer: D

With PaaS providing a fully configured and managed framework, auto-scaling can be implemented to programmatically adjust resources based on the current demands of the environment.

QUESTION 4

Cryptographic keys for encrypted data stored in the cloud should be _____ .

- A. Not stored with the cloud provider.
- B. Generated with redundancy
- C. At least 128 bits long
- D. Split into groups

Correct Answer: A

Cryptographic keys should not be stored along with the data they secure, regardless of key length. We don't split crypto keys or generate redundant keys (doing so would violate the principle of secrecy necessary for keys to serve their purpose).

QUESTION 5

Which of the following roles involves testing, monitoring, and securing cloud services for an organization?

- A. Cloud service integrator
- B. Cloud service business manager
- C. Cloud service user
- D. Cloud service administrator

Correct Answer: D

The cloud service administrator is responsible for testing cloud services, monitoring services, administering security for services, providing usage reports on cloud services, and addressing problem reports
