QUESTION 1

Which of the cloud cross-cutting aspects relates to the assigning of jobs, tasks, and roles, as well as to ensuring they are successful and properly performed?

- A. Service-level agreements
- B. Governance
- C. Regulatory requirements
- D. Auditability

Correct Answer: B

Governance at its core is the idea of assigning jobs, takes, roles, and responsibilities and ensuring they are satisfactory performed.

QUESTION 2

Which of the following threat types involves leveraging a user's browser to send untrusted data to be executed with legitimate access via the user's valid credentials?

- A. Injection
- B. Missing function-level access control
- C. Cross-site scripting
- D. Cross-site request forgery

Correct Answer: D

Cross-site scripting (XSS) is an attack where a malicious actor is able to send untrusted data to a user's browser without going through any validation or sanitization processes, or perhaps the code is not properly escaped from processing by the browser. The code is then executed on the user's browser with their own access and permissions, allowing the attacker to redirect the user's web traffic, steal data from their session, or potentially access information on the user's own computer that their browser has the ability to access. Missing function-level access control exists where an application only checks for authorization during the initial login process and does not further validate with each function call. An injection attack is where a malicious actor sends commands or other arbitrary data through input and data fields with the intent of having the application or system execute the code as part of its normal processing and queries. Cross-site request forgery occurs when an attack forces an authenticated user to send forged requests to an application running under their own access and credentials.

QUESTION 3

Which of the following is NOT one of the official risk rating categories?

- A. Critical
- B. Low

C. Catastrophic

D. Minimal

Correct Answer: C

The official categories of cloud risk ratings are Minimal, Low, Moderate, High, and Critical.

QUESTION 4

Which aspect of cloud computing makes it very difficult to perform repeat audits over time to track changes and compliance?

A. Virtualization

B. Multitenancy

C. Resource pooling

D. Dynamic optimization

Correct Answer: A

Cloud environments will regularly change virtual machines as patching and versions are changed. Unlike a physical environment, there is little continuity from one period of time to another. It is very unlikely that the same virtual machines would be in use during a repeat audit.

QUESTION 5

Digital investigations have adopted many of the same methodologies and protocols as other types of criminal or scientific inquiries.

What term pertains to the application of scientific norms and protocols to digital investigations?

A. Scientific

B. Investigative

C. Methodological

D. Forensics

Correct Answer: D

Forensics refers to the application of scientific methods and protocols to the investigation of crimes. Although forensics has traditionally been applied to well-known criminal proceedings and investigations, the term equally applies to digital investigations and methods. Although the other answers provide similar-sounding terms and ideas, none is the appropriate answer in this case.
