- ⚙️ **800,000+** Satisfied Customers

### QUESTION 1

Which of the cloud deployment models offers the easiest initial setup and access for the cloud customer?

- A. Hybrid
- B. Community
- C. Private
- D. Public

Correct Answer: D

Because the public cloud model is available to everyone, in most instances all a customer will need to do to gain access is set up an account and provide a credit card number through the service's web portal. No additional contract negotiations, agreements, or specific group memberships are typically needed to get started.

---

### QUESTION 2

At which stage of the BCDR plan creation phase should security be included in discussions?

- A. Define scope
- B. Analyze
- C. Assess risk
- D. Gather requirements

Correct Answer: A

Security should be included in discussions from the very first phase when defining the scope. Adding security later is likely to incur additional costs in time and money, or will result in an incomplete or inadequate plan.

---

### QUESTION 3

IRM solutions allow an organization to place different restrictions on data usage than would otherwise be possible through traditional security controls. Which of the following controls would be possible with IRM that would not with traditional security controls?

- A. Copy
- B. Read
- C. Delete
- D. Print

Correct Answer: D

Traditional security controls would not be able to restrict a user from printing something that they have the ability to access and read, but IRM solutions would allow for such a restriction. If a user has permissions to read a file, he can also copy the file or print it under traditional controls, and the ability to modify or write will give the user the ability to delete.

---

#### QUESTION 4

Maintenance mode requires all of these actions except:

- A. Remove all active production instances
- B. Ensure logging continues
- C. Initiate enhanced security controls
- D. Prevent new logins

Correct Answer: C

While the other answers are all steps in moving from normal operations to maintenance mode, we do not necessarily initiate any enhanced security controls.

---

#### QUESTION 5

Countermeasures for protecting cloud operations against external attackers include all of the following except:

- A. Continual monitoring for anomalous activity.
- B. Detailed and extensive background checks.
- C. Regular and detailed configuration/change management activities
- D. Hardened devices and systems, including servers, hosts, hypervisors, and virtual machines.

Correct Answer: B

Background checks are controls for attenuating potential threats from internal actors; external threats aren't likely to submit to background checks.
