- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

### QUESTION 1

Which of the following would make it more likely that a cloud provider would be unwilling to satisfy specific certification requirements?

- A. Resource pooling
- B. Virtualization
- C. Multitenancy
- D. Regulation

Correct Answer: C

With cloud providers hosting a number of different customers, it would be impractical for them to pursue additional certifications based on the needs of a specific customer. Cloud environments are built to a common denominator to serve the greatest number of customers, and especially within a public cloud model, it is not possible or practical for a cloud provider to alter their services for specific customer demands.

---

### QUESTION 2

IRM solutions allow an organization to place different restrictions on data usage than would otherwise be possible through traditional security controls. Which of the following controls would be possible with IRM that would not with traditional security controls?

- A. Copy
- B. Read
- C. Delete
- D. Print

Correct Answer: D

Traditional security controls would not be able to restrict a user from printing something that they have the ability to access and read, but IRM solutions would allow for such a restriction. If a user has permissions to read a file, he can also copy the file or print it under traditional controls, and the ability to modify or write will give the user the ability to delete.

---

### QUESTION 3

Which of the following actions will NOT make data part of the "create" phase of the cloud data lifecycle?

- A. Modifying metadata
- B. Importing data
- C. Modifying data

D. Constructing new data

Correct Answer: A

Although the initial phase is called "create," it can also refer to modification. In essence, any time data is considered "new," it is in the create phase. This can come from data that is newly created, data that is imported into a system and is new to that system, or data that is already present and modified into a new form or value. Modifying the metadata does not change the actual data.

---

#### QUESTION 4

Limits for resource utilization can be set at different levels within a cloud environment to ensure that no particular entity can consume a level of resources that impacts other cloud customers. Which of the following is NOT a unit covered by limits?

- A. Hypervisor
- B. Cloud customer
- C. Virtual machine
- D. Service

Correct Answer: A

The hypervisor level, as a backend cloud infrastructure component, is not a unit where limits may be applied to control resource utilization. Limits can be placed at the service, virtual machine, and cloud customer levels within a cloud environment.

---

#### QUESTION 5

All policies within the organization should include a section that includes all of the following, except:

- A. Policy adjudication
- B. Policy maintenance
- C. Policy review
- D. Policy enforcement

Correct Answer: A

All the elements except adjudication need to be addressed in each policy. Adjudication is not an element of policy.
