QUESTION 1

Which SteelHead domain authentication features can be used to optimize signed SMB traffic or encrypted MAPI traffic? (Choose two.)?

- A. Transient mode
- B. Domestic mode
- C. Transparent mode
- D. Delegation mode

Correct Answer: CD

Configure the Steelhead appliance to optimize Secure Windows traffic Configuration steps for Signed SMB and Signed SMB2 3.2.1 On the server-side Steelhead navigate to Configure > Optimization > CIFS (SMB1). 3.2.2 Under the SMB Signing section, check the `Enable SMB Signing` checkbox 3.2.3 Ensure the `NTLM Transparent Mode` option is selected

Note: NTLM Delegation can also be used.

Etc.

Similar Configuration steps for Encrypted MAPI.

QUESTION 2

Simplified Routing is recommended when:

- A. The SteelHead is in a different subnet from the client and servers.
- B. The SteelHead is in the same subnet as the clients and servers.
- C. The SteelHead is in the same subnet as the servers or clients.

Correct Answer: A

Enabling simplified routing eliminates the need to add static routes when the steelhead appliance is in a different subnet from the client and the server.

Note: Simplified routing changes the process used to select the destination Ethernet address for packet stransmitted from in-path interfaces.Simplified routing collects the IP address for the next hop MAC address from each packet it receives to address traffic. With simplified routing, can use either the WAN or LAN-side device as a default gateway. The steelhead appliance learns the right gateway to use by watching where the switch or router sends the traffic, and by associating the next-hop Ethernet addresses with IP addresses.

QUESTION 3

Overcoming TCP chattiness and latency are functions of:

- A. Storage Streamlining
- B. Transport Streamlining
- C. Data Streamlining
- D. Application Streamlining

Correct Answer: B

QUESTION 4

When enabling the IPSec feature on the Steelhead appliances:

- A. Both optimized and pass-through traffic are encrypted
- B. Only optimized traffic is encrypted
- C. IPSec encrypted traffic is optimized
- D. Only control traffic is encrypted, not user traffic

Correct Answer: B

QUESTION 5

Which of the following database applications can the Steelhead appliance optimize with the Application Streamlining module?

- A. IBM DB2
- B. Sybase
- C. MySQL
- D. Microsoft SQL

E. Great Plains

Correct Answer: D

QUESTION 6

The default action performed by the Steelhead appliance when it receives a packet with an existing DSCP value 46 is to:

- A. Override the value with a default of 0
- B. Override the value with the value of AF11
- C. Reflect the value received by the original packet
- D. Reflect the value returned by the symmetric TCP flow

Correct Answer: C

QUESTION 7

What are the benefits of Application Streamlining?

- A. Applications run up to 100 times faster
- B. Reduces application chattiness by 65-98%
- C. Accelerates the most important applications, such as CIFS, MAPI, NFS, HTTP/S, Lotus Notes, and MS-SQL
- D. All of the above
- E. None of the above

Correct Answer: D

QUESTION 8

When deploying a Steelhead appliance server-side out-of-path in the data center, which configuration is necessary on the client-side Steelhead appliance in order for the design to function correctly?

- A. An auto-discover rule with the IP address of the server-side Steelhead appliance
- B. A fixed-target rule with the Primary IP address of the server-side Steelhead appliance
- C. A fixed-target rule with the IP address of the destination server
- D. No configuration is required

Correct Answer: B

QUESTION 9

When the SteelHead SaaS optimization service is correctly configured, how does the SteelHead identify the SaaS traffic that needs to be optimized?

- A. The SteelHead recognized the URL of the SaaS traffic using the DPI engine.
- B. The SteelHead must be configured with appropriate in-path rules on the cloud SteelHead.
- C. The SteelHead must be configured with appropriate in-path rules on the data center side.
- D. As part of the configuration, the SteelHead downloads a list of IP addresses that correspond to SaaS servers.
- E. The SteelHead must be configured with appropriate in-path rules on the client side.

Correct Answer: E

You can configure what traffic a Steelhead appliance optimizes and what other actions it performs, using the following:

* In-Path rules - In-path rules determine the action a Steelhead appliance takes when a connection is initiated, usually by a client.

*Peering rules - Peering rules determine how a Steelhead appliance reacts when it detects a probe query.

In-path rules are used only when a connection is initiated. Because connections are typically initiated by clients, in-path rules are configured for the initiating, or client-side, Steelhead appliance.

QUESTION 10

Which endpoint operations can you perform from the SteelCentral Controller for SteelHead Mobile web interface? (Choose four.)

- A. Reset Client-Server Connection
- B. Request System Dump
- C. Request TCP Dump
- D. Reset Client-Controller Connection
- E. Request Memory Dump

Correct Answer: ABCE

Reset Client-SMC Connection: Select the check box next to one or more endpoint user names, and click Reset ClientSMC Connection to reset the connection between the Mobile Controller and the endpoint client.

Request System Dump: Select the check box next to one or more endpoint user names and click Request System Dump to upload the files. Request TCP Dump: Select the check box next to one or more endpoint user names and click Request TCP

Dump to upload the files.

Request Memory Dump: Uploads the memory dump files.

QUESTION 11

What is the command to return a Steelhead appliance back to factory defaults?

- A. (config) # restart factory reload
- B. (config) # reload factory
- C. (config) # restart clean
- D. (config) # reload clean empty
- E. (config) # reset factory reload

Correct Answer: E

QUESTION 12

Some applications are designed to open many TCP connections to accomplish required data transfers. Many of these connections are short-lived, yet each requires significant overhead to initiate communications. What RiOS feature was designed to reduce the overhead of these short-lived TCP connections?

- A. HSTCP
- B. MX-TCP
- C. Virtual Window Expansion
- D. Connection Pooling
- E. Transport Streamlining

Correct Answer: D
