QUESTION 1

What must you use to read data from a table in your database and write it to an external table?

- A. Use SQL* LOADER conventional path load.
- B. Use SQL* LOADER direct path load.
- C. Use CREATE TABLE . . ORGANIZATION EXTERNAL command with ORACLE_LOADER access driver.
- D. Use CREATE TABLE . . ORGANIZATION EXTERNAL command with ORACLE_DATAPUMP access driver.

Correct Answer: D

QUESTION 2

An employee salary in the non-partitioned EMPLOYEES table, has been updated but the transaction is uncommitted.

Which two types of lock are held by the transaction? (Choose two.)

- A. a row level lock on the row being updated
- B. a null lock on the row being updated
- C. a row shared lock on the EMPLOYEES table
- D. an exclusive lock on the EMPLOYEES table
- E. a null lock on the EMPLOYEES table

Correct Answer: AC

QUESTION 3

Which statement is true about unified auditing?

- A. The unified audit trail, by default, resides in a read-only table in the AUDSYS schema in the SYSAUX tablespace.
- B. Only the CREATE, ALTER, and DROP statements are audited for all users, including SYS.
- C. Unified auditing is enabled only if the AUDIT_TRAIL parameter is set to NONE.
- D. The unified audit trail contains audit records only from unified audit policies and AUDIT settings.

Correct Answer: A

References: https://docs.oracle.com/database/121/DBSEG/audit_admin.htm#DBSEG370

QUESTION 4

Which two statements are true about Oracle network connections? (Choose two.)

- A. A listener may listen on behalf of only one database instance at a time.
- B. A server process checks a user's authentication credentials and creates a session if the credentials are valid.
- C. The listener continuously monitors a connection after the user process connects to a service handler.
- D. The listener always spawns a new server process to deal with each new connection.
- E. A connection request from a client is always first received by a listener running on the port that is used for the connection request for the database server.

Correct Answer: BE

QUESTION 5

You conned using SQL Plus to the root container of a multitenant container database (CDB) with SYSDBA privilege.

The CDB has several pluggable databases (PDBs) open in the read/write mode.

There are ongoing transactions in both the CDB and PDBs.

What happens after issuing the SHUTDOWN TRANSACTIONAL statement?

- A. The shutdown proceeds immediately. The shutdown proceeds as soon as all transactions in the PDBs are either committed or rolled back.
- B. The shutdown proceeds as soon as all transactions in the CDB are either committed or rolled back.
- C. The shutdown proceeds as soon as all transactions in both the CDB and PDBs are either committed or rolled back.
- D. The statement results in an error because there are open PDBs.

Correct Answer: B

* SHUTDOWN [ABORT | IMMEDIATE | NORMAL | TRANSACTIONAL [LOCAL]]

Shuts down a currently running Oracle Database instance, optionally closing and dismounting a database. If the current database is a pluggable database, only the pluggable database is closed. The consolidated instance continues to run.

Shutdown commands that wait for current calls to complete or users to disconnect such as SHUTDOWN NORMAL and SHUTDOWN TRANSACTIONAL have a time limit that the SHUTDOWN command will wait. If all events blocking the shutdown have not occurred within the time limit, the shutdown command cancels with the following message:

ORA-01013: user requested cancel of current operation

* If logged into a CDB, shutdown closes the CDB instance.

To shutdown a CDB or non CDB, you must be connected to the CDB or non CDB instance that you want to close, and then enter

SHUTDOWN

Database closed.

Database dismounted.

Oracle instance shut down.

To shutdown a PDB, you must log into the PDB to issue the SHUTDOWN command.

SHUTDOWN

Pluggable Database closed.

Note:

* Prerequisites for PDB Shutdown

When the current container is a pluggable database (PDB), the SHUTDOWN command can only be used

if:

The current user has SYSDBA, SYSOPER, SYSBACKUP, or SYSDG system privilege.

The privilege is either commonly granted or locally granted in the PDB.

The current user exercises the privilege using AS SYSDBA, AS SYSOPER, AS SYSBACKUP, or AS

SYSDG at connect time.

To close a PDB, the PDB must be open.

QUESTION 6

You find this query being used in your Oracle 12c database:

```
select employee_id, first_name, salary
from hr.employees
order by employee_id
fetch first 20 percent rows only;
```

Which method is used by the optimizer to limit the rows being returned?

- A. A filter is added to the table query dynamically using ROWNUM to limit the rows to 20 percent of the total rows
- B. All the rows are returned to the client or middle tier but only the first 20 percent are returned to the screen or the application.
- C. A view is created during execution and a filter on the view limits the rows to 20 percent of the total rows.
- D. A TOP-N query is created to limit the rows to 20 percent of the total rows

Correct Answer: C

QUESTION 7

Which three statements are true about space usage alerts? (Choose three.)

- A. Alerts are issued only when the critical threshold for space available in a tablespace is breached.
- B. The sum of active extents and allocated user quotas is considered to compute space usage for an undo tablespace.
- C. Database alerts can provide warnings about low space availability at both tablespace and segment levels.
- D. Alerts are not issued for locally managed tablespaces that are offline or in read-only mode.
- E. A newly created locally managed tablespace is automatically assigned the default threshold values defined for a database.

Correct Answer: ADE

QUESTION 8

Which three statements are true about the Pre-Upgrade Information Tool? (Choose three.)

- A. It generates a script to recompile invalid objects post-upgrade.
- B. The preupgrade_fixups.sql script is created to list and describe issues in the source database.
- C. A log file, preupgrade.log, is created that contains the output of the Pre-Upgrade Information tool.
- D. It checks for required tablespaces and if they are not available, creates them automatically.
- E. The preupgrade_fixups.sql script is executed automatically to fix issues in the source database.
- F. The postupgrade_fixups.sql script is created to address issues that can be fixed after a database has been upgraded.

Correct Answer: ACE

References: <https://docs.oracle.com/database/122/UPGRD/using-preupgrade-information-tool-for-oracledatabase.htm#UPGRD-GUID-C0219AF1-AD43-4097-B358-E53E48958647>

QUESTION 9

Which four statements are true about the components of the Oracle Scheduler? (Choose four.)

- A. A schedule can be specified to a single job only.
- B. A scheduler job can point to a chain instead of pointing to a single program object.

- C. A job may get started automatically when a window opens.
- D. A program and job can be specified as part of a schedule definition.
- E. A job is specified as part of a program specification.
- F. A program can be used in the definition of multiple jobs.
- G. A program and schedule can be specified as part of a job definition.

Correct Answer: BCFG

References: https://docs.oracle.com/cd/B19306_01/server.102/b14231/schedover.htm

QUESTION 10

SALES is a valid TNS entry referring to: Hostname: HOST01

Port: 1521 Service_name: SALES_SRV You issue this command: \$ tnsping SALES Which two are true? (Choose two.)

- A. It validates that there is a listener on HOST01 port 1521.
- B. It validates that SALES is a valid TNSNAMES entry reachable by the configured name resolution method.
- C. It validates that SALES_SRV service is active in any database instance on HOST01.
- D. It validates that a SALES_SRV database on HOST01 is open.
- E. It validates that SALES_SRV service is active in a specific database instance on HOST01.

Correct Answer: AD

QUESTION 11

Which three are activities performed by SMON? (Choose three.)

- A. cleaning up the database buffer cache and freeing resources that a client process was using
- B. applying online redo during instance recovery
- C. cleaning up temporary segments that are no longer needed
- D. performing database services registration with the default listener
- E. restarting a server or a dispatcher process that terminated abnormally
- F. recovering failed transactions that were skipped during instance recovery because of file-read or tablespace offline errors

Correct Answer: BCF

QUESTION 12

Which four actions are possible during an Online Data file Move operation? (Choose four.)

- A. Creating and dropping tables in the data file being moved
- B. Performing file shrink of the data file being moved
- C. Querying tables in the data file being moved
- D. Performing Block Media Recovery for a data block in the data file being moved
- E. Flashing back the database
- F. Executing DML statements on objects stored in the data file being moved

Correct Answer: ACEF

-You can now move On line Datafile without have to stop Monoged Recovery and manually copy and rename Files. This can even be used to move Datafiles from or to ASM.

-New in Oracle Database 12c: FROM METAUNK. Physical Standby Database is in Active Data Guard Mode (opened READ ONLY and Managed Recovery is running): It is now possible to online move a Datafile while Managed Recovery is running, ie. the Physical Standby Database is in Active Data Guard Mode. You can use this Command to move the Datafile

-A flashback operation does not relocate a moved data file to its previous location. If you move a data file online from one location to another and later flash back the database to a point in time before the move, then the Data file remains in the new location, but the contents of the Data file ore changed to the contents at the time specified in the flashback. Oracle0 Database Administrator\\'s Guide 12c Release 1 (12.1)

QUESTION 13

Which three statements are true about a job chain? (Choose three.)

- A. It can contain a nested chain of jobs.
- B. It can be used to implement dependency-based scheduling.
- C. It cannot invoke the same program or nested chain in multiple steps in the chain.
- D. It cannot have more than one dependency.
- E. It can be executed using event-based or time-based schedules.

Correct Answer: ABE

QUESTION 14

One of your databases supports an OLTP workload. The default UNDO tablespace is fixed size with:

1.

RETENTION NOGUARANTEE

2.

UNDO_RETENTION is 12 minutes

User SCOTT gets this error after a query on the SALES table has run for more than 15 minutes:

ORA-01555: snapshot too old

Which three factors taken separately or in some combination might be the cause? (Choose three.)

- A. An update was made to the SALES table after the query began
- B. An update to the SALES table was committed after the query began
- C. A committed delete to the SALES table was made more than 12 minutes before the query began
- D. An uncommitted update to the SALES table was made more than 12 minutes before the query began
- E. A committed update to the SALES table was made more than 12 minutes before the query began
- F. An uncommitted delete to the SALES table was made more than 12 minutes before the query began
- G. An update was made to the SALES table before the query began

Correct Answer: ADE

QUESTION 15

Which three statements are true about automated maintenance tasks? (Choose three.)

- A. They run at predefined time intervals that are intended to occur during a period of low system load.
- B. An Oracle Scheduler job is created for each maintenance task that is scheduled to run in a maintenance window.
- C. A maintenance window is automatically extended until all the maintenance tasks defined are completed.
- D. A repository is maintained in the SYSTEM tablespace to store the history of execution of all tasks.
- E. Predefined maintenance tasks consist of automatic optimizer statistics collection, running Automatic Segment Advisor, and running Automatic SQL Tuning Advisor.

Correct Answer: ABE
