QUESTION 1

What are the consequences of setting a production order to Technically Complete (TECO)? (Choose three)

- A. The order is no longer relevant for material requirements planning.
- B. Capacity requirements are set to null.
- C. Confirmations are no longer possible.
- D. Reservations are no longer relevant for material requirements planning.
- E. The order and its operations receive the system status Locked (LKD).

Correct Answer: ABD

QUESTION 2

Where in the SAP ECC system can you define production versions?

- A. In the material master
- B. In the routing
- C. In the bill of material
- D. In the work center

Correct Answer: A

QUESTION 3

Which of the following features are offered by MRP areas in SAP ECC? (Choose two)

- A. A storage location may be assigned to different MRP areas.
- B. An MRP area may include different storage locations.
- C. Make-to-order production is supported by storage location MRP areas.
- D. Subcontracting is supported by MRP areas.

Correct Answer: BD

QUESTION 4

What could be a consequence of the confirmation of an operation?

- A. Settlement of the actual costs
- B. Reduction of capacity requirements
- C. Rescheduling of the production order
- D. Update of the planned costs

Correct Answer: B

QUESTION 5

In your company planning strategies are used in the SAP-ECC demand management that are based on consumption. Which of the following statements about consumption is true? (Choose two.)

- A. A consumption situation is dynamic and is always restructured with the planning run.
- B. Consumption can also take place between order reservations and planned independent requirements, depending on the strategy.
- C. Consumption always takes place on the material level between the planned independent requirements and the planned orders.
- D. The consumption parameters (consumption mode and consumption interval) can be set in the material master or in the MRP group.

Correct Answer: BD

QUESTION 6

Which functions can be triggered before releasing a production order? (Choose three)

- A. Selection of a routing
- B. Selection of a BOM
- C. Stock determination
- D. Confirmation
- E. Scheduling

Correct Answer: ABE

QUESTION 7

Which property applies for consumption with planning strategy 40 (planning with final assembly)?

- A. Consumption can result in subsequent adjustments of planned receipts.
- B. Consumption can reduce the originally planned production quantity.
- C. Consumption takes place with the planning material.
- D. Consumption creates a static and binding assignment between the planned independent requirements and the customer requirements for the entire procurement process.

Correct Answer: A

QUESTION 8

Which of the following properties about the planning functions available in SAP ECC applies?

- A. Long-term planning (LTP) is a long-term form of forecasting.
- B. In demand management (DM) material shortage situations are identified and corresponding receipt elements are created.
- C. Material requirements planning (MRP) includes automatic capacity leveling.
- D. Master production scheduling (MPS) refers to preferred planning of important materials.

Correct Answer: D

QUESTION 9

During a project phase, your customer raises some questions concerning parameters of the procurement type in the material master in the SAP ECC system.

Which of the following procurement type properties are valid? (Choose two)

- A. If both procurement types are allowed with entry X (both procurement types), requirements planning assumes in-house production.
- B. Procurement types E (in-house production) and F (external procurement) always have to be further refined with special procurement types.
- C. Procurement types E (in-house production), F (external procurement), or X (both procurement types) can be selected for a material independent of the material type.
- D. If procurement type E (in-house production) is set, external procurement may still be possible, depending on the material type.

Correct Answer: AD

QUESTION 10

What do you have to consider regarding ATP checks in SAP ECC that are triggered from customer orders?

- A. If the ATP check determines non-availability, it then checks in the next step whether timely procurement or production is possible.
- B. The ATP quantity is the available quantity that can be used to confirm incoming customer orders.
- C. An ATP check creates fixed links between customer orders and their confirmed receipts.
- D. The ATP check does not take stocks and receipts into account. It checks consumption of planned independent requirements.

Correct Answer: B

QUESTION 11

A material was planned in the context of SAP ECC material requirements planning. The MRP controller subsequently processed the material by manually converting a specific planned order into a production order. The MRP controller now accesses the current stock/requirements list and the MRP list for this material and compares these two lists.

What do you have to consider for the two lists at this stage? (Choose two)

- A. The stock/requirements list was updated the moment it was accessed.
- B. The MRP list displays the production order.
- C. The MRP list has the status "processed".
- D. The stock/requirements list displays the production order.

Correct Answer: AD

QUESTION 12

Which of the following are properties of ECC Multi-Site Planning? (Choose two.)

- A. Both withdrawal from alternative plant and withdrawal from another plant are defined via special procurement keys.
- B. The use of scope of planning (cross-plant total planning) is mandatory for Multi-Site Planning.
- C. When using one-step stock transfer posting, transfer stock is created in the receiving plant.
- D. When using two-step stock transport order with delivery, the receiving plant is defined as a customer.

Correct Answer: AD

QUESTION 13

What do you have to consider regarding consumption? (Choose two)

- A. Consumption takes place on the material level between the planned independent requirements and the planned orders.
- B. Consumption is restructured with the planning run.
- C. Consumption can take place between order reservations and planned independent requirements, depending on the strategy.
- D. Consumption parameters (consumption mode and consumption interval) can be set in the material master or in the MRP group.

Correct Answer: CD

QUESTION 14

Which of the following elements do you have to prepare for costing of a production order to function without errors? (Choose three.)

- A. Assign costing variants to order type.
- B. Propose a standard text key in work center.
- C. Assign a production scheduling profile to the material master (product).
- D. Enter formulas for costing in the work center.
- E. Use an operation control key with the indicator costing-relevant.

Correct Answer: ADE

QUESTION 15

You select the master data for production orders via production versions.

Which information is contained in a production version?

- A. The explosion dates for the routing and BOM
- B. The routing and BOM alternatives to be used
- C. The default order type to be used
- D. The control parameters for selecting routings and BOM

Correct Answer: B
