QUESTION 1

You need to ensure that Windows feature updates on Client1 are deferred for 15 days when the updates become generally available.

To complete this task, sign in to the required computer or computers.

Correct Answer: See below.

1.

Select the Start button, then select Settings > Update and Security > Windows Update.

2.

Under Update settings, select Advanced options.

3.

From the boxes under Choose when updates are installed, select the number of days you would like to defer a feature update or a quality update.

Reference: <https://support.microsoft.com/en-us/help/4026834/windows-10-defer-feature-updates>

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A user named User1 has a computer named Computer1 that runs Windows 10. Computer1 is joined to an Azure Active Directory (Azure AD) tenant named contoso.com. User1 joins Computer1 to contoso.com by using user1@contoso.com.

Computer1 contains a folder named Folder1. Folder1 is in drive C and is shared as Share1. Share1 has the permission shown in the following table.

Group	Share permission
Everyone	Full control
AzureAD\user1@contoso.com	Owner

A user named User2 has a computer named Computer2 that runs Windows 10. User2 joins Computer2 to contoso.com by using user2@contoso.com.

User2 attempts to access Share1 and receives the following error message: "The username or password is incorrect."

You need to ensure that User2 can connect to Share1.

Solution: You create a local user account on Computer1 and instruct User2 to use the local account to connect to Share1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 3

You need to ensure that a local user named User1 can establish a Remote Desktop connection to Client2.

To complete this task, sign in to the required computer or computers.

Correct Answer: See below.

Add User to Remote Desktop Users Group via Settings App

1.

Open the Settings app on Client2 and go to System -> Remote Desktop. Click on the Select users that can remotely access this PC link on the right side.

2.

When the Remote Desktop Users dialog opens, click on Add.

3.

Click on Advanced.

4.

Click on Find Now and then select any user account you want to add to the "Remote Desktop Users" group, and click OK.

5.

Click OK and you're done.

<https://www.top-password.com/blog/add-user-to-remote-desktop-users-group-in-windows-10/>

QUESTION 4

HOTSPOT

You have two computers named Computer1 and Computer2 that run Windows 10. The computers are in a workgroup.

You perform the following configurations on Computer1:

1.

Create a user named User1.

2.

Add User1 to the Remote Desktop Users group.

You perform the following configurations on Computer2:

1.

Create a user named User1 and specify the same user password as the one set on Computer1.

2.

Create a share named Share2 and grant User1 Full control access to Share2.

3.

Enable Remote Desktop.

What are the effects of the configurations? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

If User1 attempts to access Share2 from Computer1, the user will:

<input type="checkbox"/>	Access Share2 without a prompt
<input type="checkbox"/>	Be prompted for credentials
<input type="checkbox"/>	Be denied access to Share2

If User1 attempts to sign in to Remote Desktop on Computer2 from Computer1, the user will:

<input type="checkbox"/>	Sign in to Remote Desktop without a prompt
<input type="checkbox"/>	Be prompted for credentials and be able to sign in as User1.
<input type="checkbox"/>	Be prompted for credentials and be prevented from signing in as User1.

Correct Answer:

Answer Area

If User1 attempts to access Share2 from Computer1, the user will:

▼
Access Share2 without a prompt
Be prompted for credentials
Be denied access to Share2

If User1 attempts to sign in to Remote Desktop on Computer2 from Computer1, the user will:

▼
Sign in to Remote Desktop without a prompt
Be prompted for credentials and be able to sign in as User1.
Be prompted for credentials and be prevented from signing in as User1.

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a laptop named Computer1 that runs Windows 10.

When in range, Computer1 connects automatically to a Wi-Fi network named Wireless1.

You need to prevent Computer1 from automatically connecting to Wireless1.

Solution: From the properties of the Wi-Fi adapter, you disable Link-Layer Topology Discovery Responder.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Link-Layer Topology Discovery is used by their Network Map feature to display a graphical representation of the local area network (LAN) or wireless LAN (WLAN), to which the computer is connected.

References: https://en.wikipedia.org/wiki/Link_Layer_Topology_Discovery

QUESTION 6

You have a computer that runs Windows 10 and contains the folders shown in the following table.

Name	Path
FolderA	C:\FolderA
FolderB	C:\FolderA\FolderB
FolderC	C:\FolderA\FolderB\FolderC

You create the groups shown in the following table.

Name	Members
Group1	User1, User2
Group2	User2, User3
Group3	User1, User3

On FolderA, you remove permission inheritance. To each folder, you assign the NTFS permissions shown in the following table.

Folder	Permission
FolderA	Modify to group1 Read to Group2
FolderB	Write to Group2
FolderC	Read to Group3

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

Statements

User1 can read and write all files in FolderC.

User2 can delete all files in FolderB.

User3 can delete all files in FolderC.

Yes

No

Correct Answer:

Statements

- User1 can read and write all files in FolderC.
- User2 can delete all files in FolderB.
- User3 can delete all files in FolderC.

Yes	No
<input checked="" type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input checked="" type="radio"/>
<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 7

An employee reports that she must perform a BitLocker recovery on her laptop. The employee does not have her BitLocker recovery key but does have a Windows 10 desktop computer. What should you instruct the employee to do from the desktop computer?

- A. Run the `manage-bde.exe -status` command
- B. From BitLocker Recovery Password Viewer, view the computer object of the laptop
- C. Go to <https://account.activedirectory.windowsazure.com> and view the user account profile
- D. Run the `Enable-BitLockerAutoUnlock` cmdlet

Correct Answer: C

The BitLocker recovery key is stored in Azure Active Directory.

References: <https://celedonpartners.com/blog/storing-recovering-bitlocker-keys-azure-active-directory/>

QUESTION 8

You have a computer that runs Windows 10.

You can start the computer but cannot sign in.

You need to start the computer into the Windows Recovery Environment (WinRE).

What should you do?

- A. Turn off the computer. Turn on the computer, and then press F8.
- B. Turn off the computer. Turn on the computer, and then press F10.
- C. From the sign-in screen, hold the Shift key, and then click Restart.
- D. Hold Alt+Ctrl+Delete for 10 seconds.

Correct Answer: C

<https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/windows-recovery-environment--windows-re--technical-reference>

QUESTION 9

You have a workgroup computer named Computer1 that runs Windows 10. Computer1 has the user accounts shown in the following table.

Name	Member of
User1	Users
User2	Guests
User3	Users, Administrators
User4	Users, Guests
Administrator	Administrators

User3, User4, and Administrator sign in and sign out on Computer1. User1 and User2 have never signed in to Computer1. You are troubleshooting policy issues on Computer1. You sign in to Computer1 as Administrator.

You add the Resultant Set of Policy (RsoP) snap-in to an MMC console. Which users will be able to sign in on Computer1?

- A. User1, User3, and User4 only
- B. Administrator only
- C. User1, User2, User3, User4, and Administrator
- D. User3, User4, and Administrator only

Correct Answer: D

The Interactive logon: Number of previous logons to cache (in case domain controller is not available) policy setting determines whether a user can log on to a Windows domain by using cached account information. Logon information for

domain accounts can be cached locally so that, if a domain controller cannot be contacted on subsequent logons, a user can still log on.

<https://docs.microsoft.com/en-us/windows/security/threat-protection/security-policy-settings/interactive-logon-number-of-previous-logons-to-cache-in-case-domain-controller-is-not-available>

QUESTION 10

HOTSPOT

You have 100 computers that run Windows 10 and are members of an Active Directory domain.

Two support technicians named Tech1 and Tech2 will be responsible for monitoring the performance of the computers.

You need to configure the computers to meet the following requirements:

1.

Ensure that Tech1 can create and manage Data Collector Sets (DCSs).

2.

Ensure that Tech2 can start and stop the DCSs.

3.

Use the principle of least privilege.

To which group should you add each technician? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Tech1:

	▼
Event Log Readers	
Performance Log Users	
Performance Monitor Users	
Remote Management Users	

Tech2:

	▼
Event Log Readers	
Performance Log Users	
Performance Monitor Users	
Remote Management Users	

Correct Answer:

Answer Area

Tech1:

Event Log Readers
Performance Log Users
Performance Monitor Users
Remote Management Users

Tech2:

Event Log Readers
Performance Log Users
Performance Monitor Users
Remote Management Users

QUESTION 11

You have a workgroup computer that runs Windows 10.

You need to set the minimum password length to 12 characters.

What should you use?

- A. Local Group Policy Editor
- B. Credential Manager in Control Panel
- C. Local Users and Groups in Computer Management
- D. Sign-in options in the Settings app

Correct Answer: A

QUESTION 12

You have a computer named Computer1 that runs Windows 10. Computer1 connects to multiple wireless networks.

You need to view the wireless networks to which Computer1 connects.

What should you use?

- A. the System log in Event Viewer
- B. Wi-Fi in the Settings app
- C. the properties of the wireless adapter in Network Connections in Control Panel
- D. the Details tab for the wireless adapter in Device Manager

Correct Answer: B
