QUESTION 1

Which crucial aspect of cloud computing can be most threatened by insecure APIs?

- A. Automation
- B. Resource pooling
- C. Elasticity
- D. Redundancy

Correct Answer: A

Cloud environments depend heavily on API calls for management and automation. Any vulnerability with the APIs can cause significant risk and exposure to all tenants of the cloud environment. Resource pooling and elasticity could both be impacted by insecure APIs, as both require automation and orchestration to operate properly, but automation is the better answer here. Redundancy would not be directly impacted by insecure APIs.

QUESTION 2

Which of the following is NOT a domain of the Cloud Controls Matrix (CCM)?

- A. Data center security
- B. Human resources
- C. Mobile security
- D. Budgetary and cost controls

Correct Answer: D

Budgetary and cost controls is not one of the domains outlined in the CCM.

QUESTION 3

Where is an XML firewall most commonly deployed in the environment?

- A. Between the application and data layers
- B. Between the IPS and firewall
- C. Between the presentation and application layers
- D. Between the firewall and application server

Correct Answer: D

XML firewalls are most commonly deployed in line between the firewall and application server to validate XML code before it reaches the application.

QUESTION 4

Which component of ITIL involves planning for the restoration of services after an unexpected outage or incident?

- A. Continuity management
- B. Problem management
- C. Configuration management
- D. Availability management

Correct Answer: A

Continuity management (or business continuity management) is focused on planning for the successful restoration of systems or services after an unexpected outage, incident, or disaster. Problem management is focused on identifying and mitigating known problems and deficiencies before they occur. Availability management is focused on making sure system resources, processes, personnel, and toolsets are properly allocated and secured to meet SLA requirements. Configuration management tracks and maintains detailed information about all IT components within an organization.

QUESTION 5

What does the "SOC" acronym refer to with audit reports?

- A. Service Origin Confidentiality
- B. System Organization Confidentiality
- C. Service Organizational Control
- D. System Organization Control

Correct Answer: C

QUESTION 6

DLP solutions can aid in deterring loss due to which of the following?

- A. Power failure
- B. Performance
- C. Bad policy
- D. Malicious disclosure

Correct Answer: D

DLP tools can identify outbound traffic that violates the organization's policies. DLP will not protect against losses due to performance issues or power failures. The DLP solution must be configured according to the organization's policies, so bad policies will attenuate the effectiveness of DLP tools, not the other way around.

QUESTION 7

The GAPP framework was developed through a joint effort between the major Canadian and American professional accounting associations in order to assist their members with managing and preventing risks to the privacy of their data and customers.

Which of the following is the meaning of GAPP?

- A. General accounting personal privacy
- B. Generally accepted privacy practices
- C. Generally accepted privacy principles
- D. General accounting privacy policies

Correct Answer: C

QUESTION 8

The application normative framework is best described as which of the following?

- A. A superset of the ONF
- B. A stand-alone framework for storing security practices for the ONF
- C. The complete ONF
- D. A subnet of the ONF

Correct Answer: D

Remember, there is a one-to-many ratio of ONF to ANF; each organization has one ONF and many ANFs (one for each application in the organization). Therefore, the ANF is a subset of the ONF.

QUESTION 9

Which aspect of cloud computing will be most negatively impacted by vendor lock-in?

- A. Elasticity
- B. Reversibility
- C. Interoperability
- D. Portability

Correct Answer: D

A cloud customer utilizing proprietary APIs or services from one cloud provider that are unlikely to be available from another cloud provider will most negatively impact portability.

QUESTION 10

Identity and access management (IAM) is a security discipline that ensures which of the following?

- A. That all users are properly authorized
- B. That the right individual gets access to the right resources at the right time for the right reasons.
- C. That all users are properly authenticated
- D. That unauthorized users will get access to the right resources at the right time for the right reasons

Correct Answer: B

Options A and C are also correct, but included in B, making B the best choice. D is incorrect, because we don't want unauthorized users gaining access.

QUESTION 11

APIs are defined as which of the following?

- A. A set of protocols, and tools for building software applications to access a web-based software application or tool
- B. A set of routines, standards, protocols, and tools for building software applications to access a web-based software application or tool
- C. A set of standards for building software applications to access a web-based software application or tool
- D. A set of routines and tools for building software applications to access web-based software applications

Correct Answer: B

All the answers are true, but B is the most complete.

QUESTION 12

Which of the following actions will NOT make data part of the "create" phase of the cloud data lifecycle?

- A. Modifying metadata
- B. Importing data
- C. Modifying data
- D. Constructing new data

Correct Answer: A

Although the initial phase is called "create," it can also refer to modification. In essence, any time data is considered "new," it is in the create phase. This can come from data that is newly created, data that is imported into a system and is new to that system, or data that is already present and modified into a new form or value. Modifying the metadata does

not change the actual data.
